Transplantation Immunology | SpringerLink

Transplantation is the process of moving cells, tissues or organs from one site to another for the purpose of replacing or repairing damaged or diseased organs and tissues. It saves thousands of lives each year. However, the immune system poses a significant barrier to successful organ transplantation when tissues/organs are transferred from one individual to another.

Transplant Immunology - British Society for Immunology

The diagnosis and treatment of diverticulitis after solid organ transplantation are challenging, since immunosuppressive therapies may mask presenting signs and symptoms and impair the ability to contain the infective process . Often, the clinical manifestation and physical examination do not reflect the severity of intra-abdominal disease; signs of infection, such as
