Weather And

Climate

climate change is the most frequently misunderstood aspect of climate science.

Some sectors of the public continue to debate whether these ideas can be true, despite the well-established science.

There are several possible reasons why students may resist the conclusion that humans are altering the climate.

6. Humans Affect Climate

Human health is vulnerable to climate change. The changing environment is expected to cause more heat stress, an increase in waterborne diseases, poor air quality, and diseases transmitted by insects and rodents. Extreme weather events can compound many of these health threats.
