The IEC 60068-2 is a collection of more than 60 standards. These standards are applicable to a climatic category, such as vibration, shock, change of temperature, dry heat, salt mist, dust and sand, mold, and the combination of them. I will not introduce them one by one. And you can have a rough understanding of each standard from its name.

### **IEC 60068 Testing Standard - [belltestchamber.com](http://belltestchamber.com)**

IEC 60068-2-31 is a test procedure for simulating the effects of rough handling shocks, knocks, jolts and falls which may occur during repair work or rough handling in operational use. It is intended primarily for electronic equipment. This method does not simulate the effects of shocks received during transportation as loosely constrained cargo.

IEC 60068-2-78:2012 establishes a test method for determining the ability of components or equipment to withstand transportation, storage and use under conditions of high humidity. The object of this standard is to investigate the effect of high humidity at constant temperature without condensation on a specimen over a prescribed period.

### **IEC 60068-2-78:2012 | IEC Webstore**

International Standard IEC 60068-2-27 has been prepared by IEC technical committee 104: Environmental conditions, classification and methods of test This fourth edition cancels and replaces the third edition, published in 1987, and includes the merging of IEC 60068-2-29, second edition (1987). It constitutes a technical revision.

edition is published;<br /> - the introduction of soft packaged specimens as defined in the IEC ad hoc working group document agreed in Stockholm:2000.

### **IEC 60068-2-27:2008**

"IEC 60068-2-27 provides a standard procedure for determining the ability of a specimen to withstand specified severities of non-repetitive or repetitive shocks. The purpose of this test is to reveal mechanical weakness and/or degradation in specified performances, or accumulated damage or degradation caused by shocks.
