This chapter describes the AIDS pandemic as being intimately linked with inequitable social conditions. The case is made that these social inequities must be the primary “target” of HIV prevention efforts. The five pillar model is introduced and used as guide for illustrating the inherent value of structural-level interventions to the goal of ending AIDS.

Social Conditions and the AIDS Pandemic - Oxford Scholarship

Social identity is the part of the self that is defined by one’s group memberships. Social identity theory, which was formulated by social psychologist Henri Tajfel and John Turner in the 1970s, describes the conditions under which social identity becomes more important than one’s identity as an individual. The theory also specifies the ways in which social identity can influence intergroup ...
