Introduction 2(1)This Code of Practice outlines the minimum environmental requirements for the construction and operation of tanker truck washing facilities. It is based on current knowledge and acceptable practice and is intended to document these practices for the tanker truck washing industry.

### **Code of Practice for Tanker Truck Washing Facilities**

The purpose of this publication is to provide guidance for the design, construction and operation of workshops for the maintenance of road tankers that transport main petroleum fuels products (petrol, kerosene, diesel/gas oil and aviation fuels) and which have not been certified gas-free beforehand. In this publication, 'maintenance' includes inspection, test and repair activities, but excludes repairs to the tank shell and product pipework.

An oil tanker, also known as a petroleum tanker, is a ship designed for the bulk transport of oil or its products. There are two basic types of oil tankers: crude tankers and product tankers. Crude tankers move large quantities of unrefined crude oil from its point of extraction to refineries. For example, moving crude oil from oil wells in a producing country to refineries in another country.
